

# Enviromental data in archaeology – On the Road to a Robust Lab Workflow

Jan Fišer, Jan Plíšek and Barbora Kubátová

Co-funded by  
the European Union

University of Hradec Králové  
Philosophical Faculty

# Lab Introducing

# Lab Focus – Human Imprint in the Soil

- Field
  - Sampling design
  - Sample collection
- Analysis
  - Anthropogenic soils and sediments
  - Geochemistry
  - Portable OSL
  - Hyperspectral data

# Lab Ecosystem in Numbers

- 9 People (4 primary, 5 part time)
- 3 050 samples were taken in the field in 2025
- 6 764 samples were analysed in 2025
- 3 lab rooms
- 2 shipping containers
- Founded in 2023 as a part of CETA (Centre for Field Archaeology, University of Hradec Králové)

# Why we need FAIR Data?

- Systematic and transparent data management
- Prevents data loss
- Saves time and resources
- Improves data quality and consistency
- Enables effective collaboration
- Increases scientific impact and reuse

# Lab Workflow: Past and current state

# Quality Data Begin in the Field

- Clear field documentation enables seamless digitalization
- Redundant documentation increases reliability
- Standardized field forms and metadata ensure comparability
- Mandatory core metadata must always be recorded (location, context, date, project...)

Velkokapacitní vzorkování - geochemie a OSL						
Výzkum: D35, 008/2023, úsek 5				Číslo listu: 54		
Projekt: VKV, 2024/1			Datum: 29.5.2024			
číslo vzorku	objekt	sj	hloubka	poloha (povrch, střed, dno)	účel (glen, osl- vertikal, osl- horizontal)	poznámka

1779	1346	1	0-5	P/S/D	G/O-v/O-h	

# First steps in the Lab

- Drying samples
- Digitalization of field paper documentation
  - All metadata are in a single shared file
  - Sample receive a unique lab ID
- Archiving of the documentation
  - A clear and consistent folder structure
  - txt; csv; png; jpg, pdf, xlsx
- Standardized labeling of samples, bags, and boxes

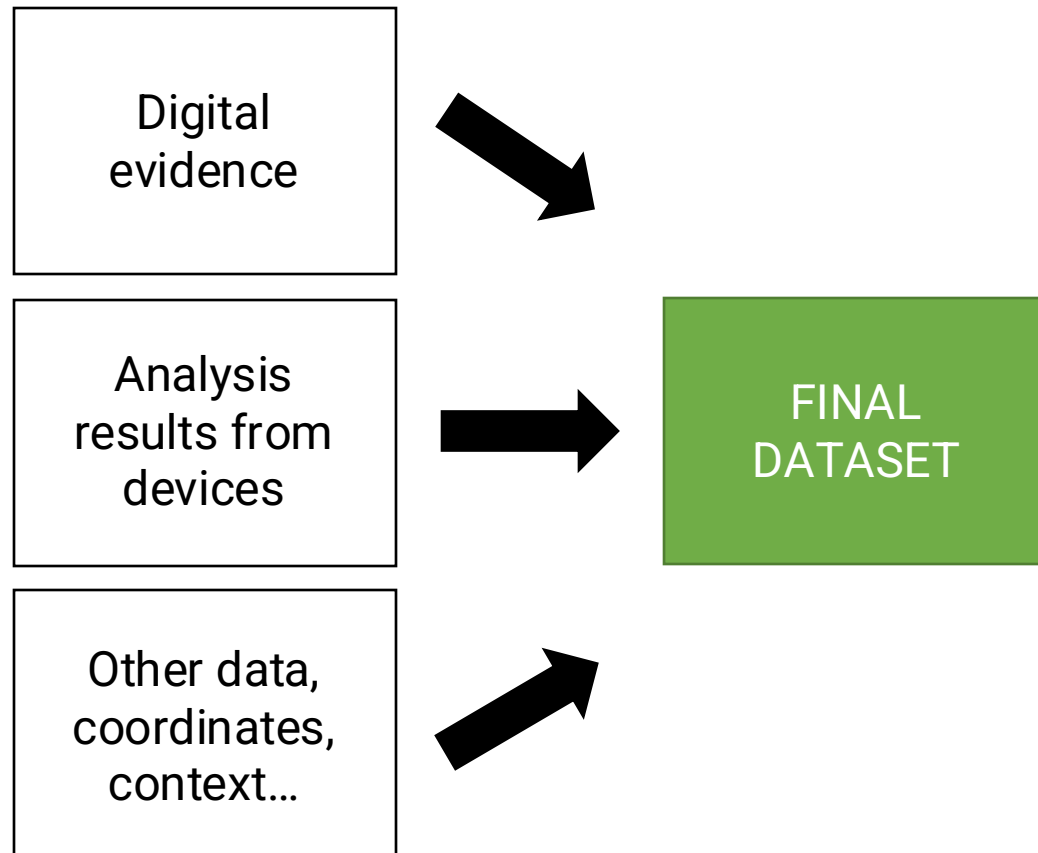

# Lab Processes and Analysis

- Sample preparation
  - Grinding, pressing, drying, sieving...
- Analyses
  - WD XRF, ED XRF, POSL, spectroradiometry...
  - ➡ Archiving analysis results in structured folders
- All preparation and analytical steps are recorded in the digital evidence

# Final dataset

- Final outputs include comprehensive datasets with metadata
- The creation of the final dataset is still time-consuming and requires better data unification to improve efficiency

# New Lab Workflow: In Progress

# Our journey to New Lab Workflow

## Internal contacts

Face to face, online meetings, lab visit,  
emails, Loop

Open Science Office, Project Department, IT

## External contacts

EOSC, Discord, DS community meetings  
colleagues from archaeology related fields

# Future Lab Workflow

ensure work procedures that will lead to **data fairification** both in the laboratory and externally,

development of methodologies, education of all colleagues

creation of a **comprehensive data workflow** in line with **FAIR, NDI,** and **EOSC** standards

# Summary of New Lab Workflow

Sample and metadata recording

Automation and standardisation

Persistent identification

Integration and interoperability

Open formats

Sustainability and openness

- ELN, file naming, backup
- Kadi4Mat, partially automated metadata creation, CCMM, controlled vocabularies/ontologies
- (internal/external) PID/DOI
- integration with the NRP
- standard open formats, supporting reuse, licence
- workflow will be released as open-source, cooperation, collaboration

# Mini-project

fairification will be time-consuming and labor-intensive

we plan to apply for a mini-project  
(outputs of project Open Science II)

proper workflow, methodology, and datasets  
two mini-projects will be requested from our  
university (departments of the Phil. Faculty)

teamwork across the university (CETA, PD, IT, OSD, faculty)

# Where we are now

- A basic analysis of the data and its status has been carried out, with further analysis to follow.
- We have prepared a request for an opinion from the working group („PS HUMA“).
- We are educating ourselves (EOSC events, webinars, self-study).
- We are actively seeking opportunities to present our procedures and collect feedback (miniproject, OS Award, Archeovault – focus groups, Poster Session etc.)

# Open Science at the University of Hradec Kralove

*"Open Science is currently in the Phoenix phase, which has swept through institutions."*

*(Hana Tomášková, Vice-Rector for Science, UHK)*

- [Open Science Award 2025](#)
- Are there any data stewards here at all?
  - **Open Science Office** (Lenka Špičánová)
  - 2 projects **Programme Johannes Amos Comenius** (Barbora Kubátová)

# To be FAIR, or not to be FAIR

- requirements of the **financial provider/publisher vs. existing practice** (involuntary necessity) = a data steward's nightmare
- **improvement of one's own accord** = a data steward's dream
- meet our (good) practice in CETA
  - the neverending journey from datasteward/beginner to datasteward/genius
  - a slightly different kind of experiment at our experimental laboratory

# Main Points

- Cooperation and communication are essential (lab team, data steward, colleagues...)
- Effective data management must start at the moment the sample originates
- Changing data practices requires structural change and affects the whole workflow
- All lab staff must understand the workflow to create data responsibly and effectively

# Thank You!
